Performance Review March 2023

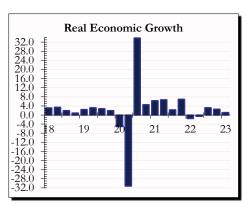

**DANAB**ASSOCIATES

#### **ECONOMIC ENVIRONMENT**

#### **Something For Doves and Hawks**

In the first quarter, global markets experienced broad gains. The MSCI All Country World index, serving as a benchmark for global equity markets, increased by 7.4%. Additionally, the first estimate of Q1 2023 GDP from the Bureau of Economic Analysis increased at an annualized rate of 1.1%

However, despite the positive returns by domestic equity indices

and projected GDP growth, the first quarter proved to be a challenging period. The bankruptcy of Silicon Valley Bank was the major story of the quarter, marking the first substantial bank failure in over a decade. The

bank's failure was attributed to poor risk management, irresponsible underwriting, and the concentration of depositors in one industry. Analysts have viewed these problems as idiosyncratic, and the market largely shrugged, as investors concluded that the systemic risk was minimal after the federal government deposit backstop.

This incident highlights the broader issue that market participants have been facing. Regardless of one's position, there has been little difficulty in finding data or anecdotes to support either chosen stance. The data has been contradictory, leading to difficulties in establishing a unified view of the market.

Interest rate doves, those who advocate for interest rates to be cut, point to the moderation in payroll growth, average hourly earnings, and job openings, as evidence that the Federal Reserve has done enough. Conversely, rate hawks, who believe the Federal Reserve should continue to hike rates, express concern about inflation and the tight labor market. In March, inflation rose slightly (0.1%), but the softening was mainly due to the food and energy categories, which continue to fluctuate significantly. Core inflation, which excludes food and energy, remained firm, rising by 0.4%, with the shelter category being the primary contributor to its stability.

Due to this ambiguity, the market's risk appetite has shifted daily. While some investors focus on the upside potential of a Fed policy pivot, others worry about high stock valuations. This oscillation of opinions and market pricing will continue until market participants reach a consensus on inflation, which should allow some stabilization in the market at large.

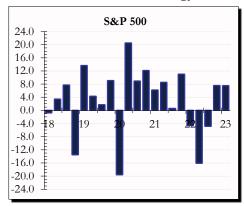

## **DOMESTIC EQUITIES**

## **Positive Stress**

The U.S. stock market saw positive returns in the first quarter of 2023. The Russell 3000, an index that measures the broad domestic market, increased by 7.2%, while the S&P 500, which measures the performance of large-cap companies, gained 7.5%.

The Russell Mid Cap, which covers mid-cap companies, increased by 4.1%, and the Russell 2000, which tracks small-cap companies, gained 2.7%. This was a reversal from last quarter, when small capitalization companies outperformed their larger peers.

Across all market capitalizations, growth outperformed value. This performance differential was led by the Consumer Discretionary and Information Technology sectors, which saw the highest gains.

Both increased more than 15%. The bulk of these gains were driven by the largest companies. 75% of the Russell 1000 Growth total return can be attributed to the top seven stocks by market cap: Apple,

Microsoft, Nvidia, Alphabet, Tesla, Amazon, and Meta.

On the other side of the coin, value had a tough quarter. Small-cap value was the worst performer of any of the sub-market styles. The performance drag was partly due to small-cap financials, which were impacted by the bankruptcy of Silicon Valley Bank and the subsequent fears surrounding regional banks.

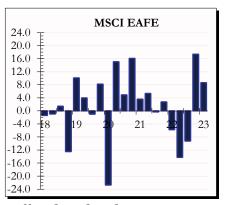

Large cap companies continue to benefit from price multiple premiums, relative to their smaller peers. As of March 31, large cap equities, using the S&P 500 as a proxy, had a trailing P/E (price to earnings multiple) of 22. Small capitalization companies, using the S&P 600 as a proxy, had a trailing P/E of 13.

## INTERNATIONAL EQUITIES

#### **Modest Movement**

International markets continued to see gains in the first quarter of 2023. The MSCI All Country World ex-US index, which tracks global markets excluding the United States, gained 7.0%.

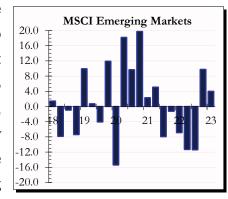

In developed markets, the MSCI EAFE index returned 8.6%.

Europe performed well with France and Germany each returning more than 14%. Overall, Europe gained 10.7%. However, developed Asian equities held the index back, only returning approximately 5%. European financials

suffered under the same stress as their American counterparts. Credit Suisse had to file for bankruptcy, in an untimely end to a preeminent firm.

Emerging markets saw more modest gains of 4.0%. Mexico and Taiwan were the standout performers with gains of 20.4% and 14.8%, respectively. China, the index's largest country by weighting, also helped the index's performance, gaining

4.7%. Although U.S.-China relations have tensed over the last few

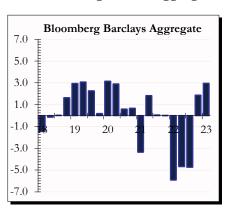

months, optimism around the re-opening of the economy and easing of the regulatory regime on the technology sector buoyed the overall market. India ended the quarter in negative territory as foreign investors fled due to concerns over economic growth and accounting concerns at one of the country's larger firms.

In a continuation from what was seen in domestic markets, Growth equities outpaced their Value peers across the broad universe, although the outperformance was much more pronounced in developed countries relative to emerging countries. The outperformance of Growth in developed markets was 4.9%, compared to 0.1% in Emerging Markets.

#### **BOND MARKET**

#### **Income-ing**

During the first quarter of 2023, fixed income markets delivered solid returns. The Bloomberg U.S. Aggregate Bond Index gained 3.0%, matching the performance of its international counterpart, the Bloomberg Global Aggregate index.

The yield on the 10-year U.S. Treasury declined to 3.5% by the end of March. Longer-term Treasuries outperformed shorter-term Treasuries as the yield curve flattened. Market participants are still watching the yield curve closely as near-

term rates remain at levels much higher than those seen at the long end. The yield curve has not been this inverted in decades.

Mortgage-backed securities (MBS) underperformed by 50 basis points on a duration-adjusted basis, with a return of 2.5%. Payment stress has been isolated in the commercial space, primarily in the office sector. Fixed rate mortgage payers are in a much better position than their floating rate counterparts.

The Bloomberg Barclays High Yield Index gained 3.6%. Defaults are still at near-historical lows as companies have had little problem making payments. However, the CCC credit tier underperformed the more credit-worthy tiers (BB & B) as it reacted poorly to the banking-induced market volatility.

#### **CASH EQUIVALENTS**

#### **Cash is King**

The three-month T-Bill returned 0.47% for the third quarter. This is the 60th quarter in a row that it's return has been less than 75 basis points. Three-month treasury bills are now yielding 4.85%.
